PLATFORM ALL

Users are forced to
choose between
collaboration and
customisation.

High Collaboration, Low Customisation:

Platforms like Facebook, Instagram, Amazon, and Uber offer extensive collaboration but limit users to predefined data structures and interactions.

High Customisation, Low Collaboration:

Tools like Salesforce, Airtable, Google Sheets, or custom-built apps offer flexibility in data structuring but lack seamless, wide-ranging collaboration capabilities.

We're vakh
and we want to
platform all and
every.

Users, Forms, Sharing

- Person 1
- Manufacturer
- A father and fo...
- Celebrity
- An employee at Delivery...
- School
- Cinema

Individual, Group, Business, Organisation, everyone can be a user on vakh.

- Assignments
- Payroll
- Order
- Lectures
- Backlog
- Stories
- Write to Us
- Bookings
- Files
- Vlog

Users can create Forms and add records to them.

Users can give read/write/edit access on objects and records to other users.

INFINITE POSSIBILITIES

Where we are today and here's how we pace ahead.

We can make up some numbers but we won't.

The market is big. We are social platform for everything, from content, to commerce, and else. Our business philosophy would be to create high revenue and margins per employee, keep the business lean, and build the app in an extensible way such that we can platform all (or most) use cases of internet interactions.
