

vakh^s

PLATFORM ALL

social apps have fixed
formats and
databases are not
social.

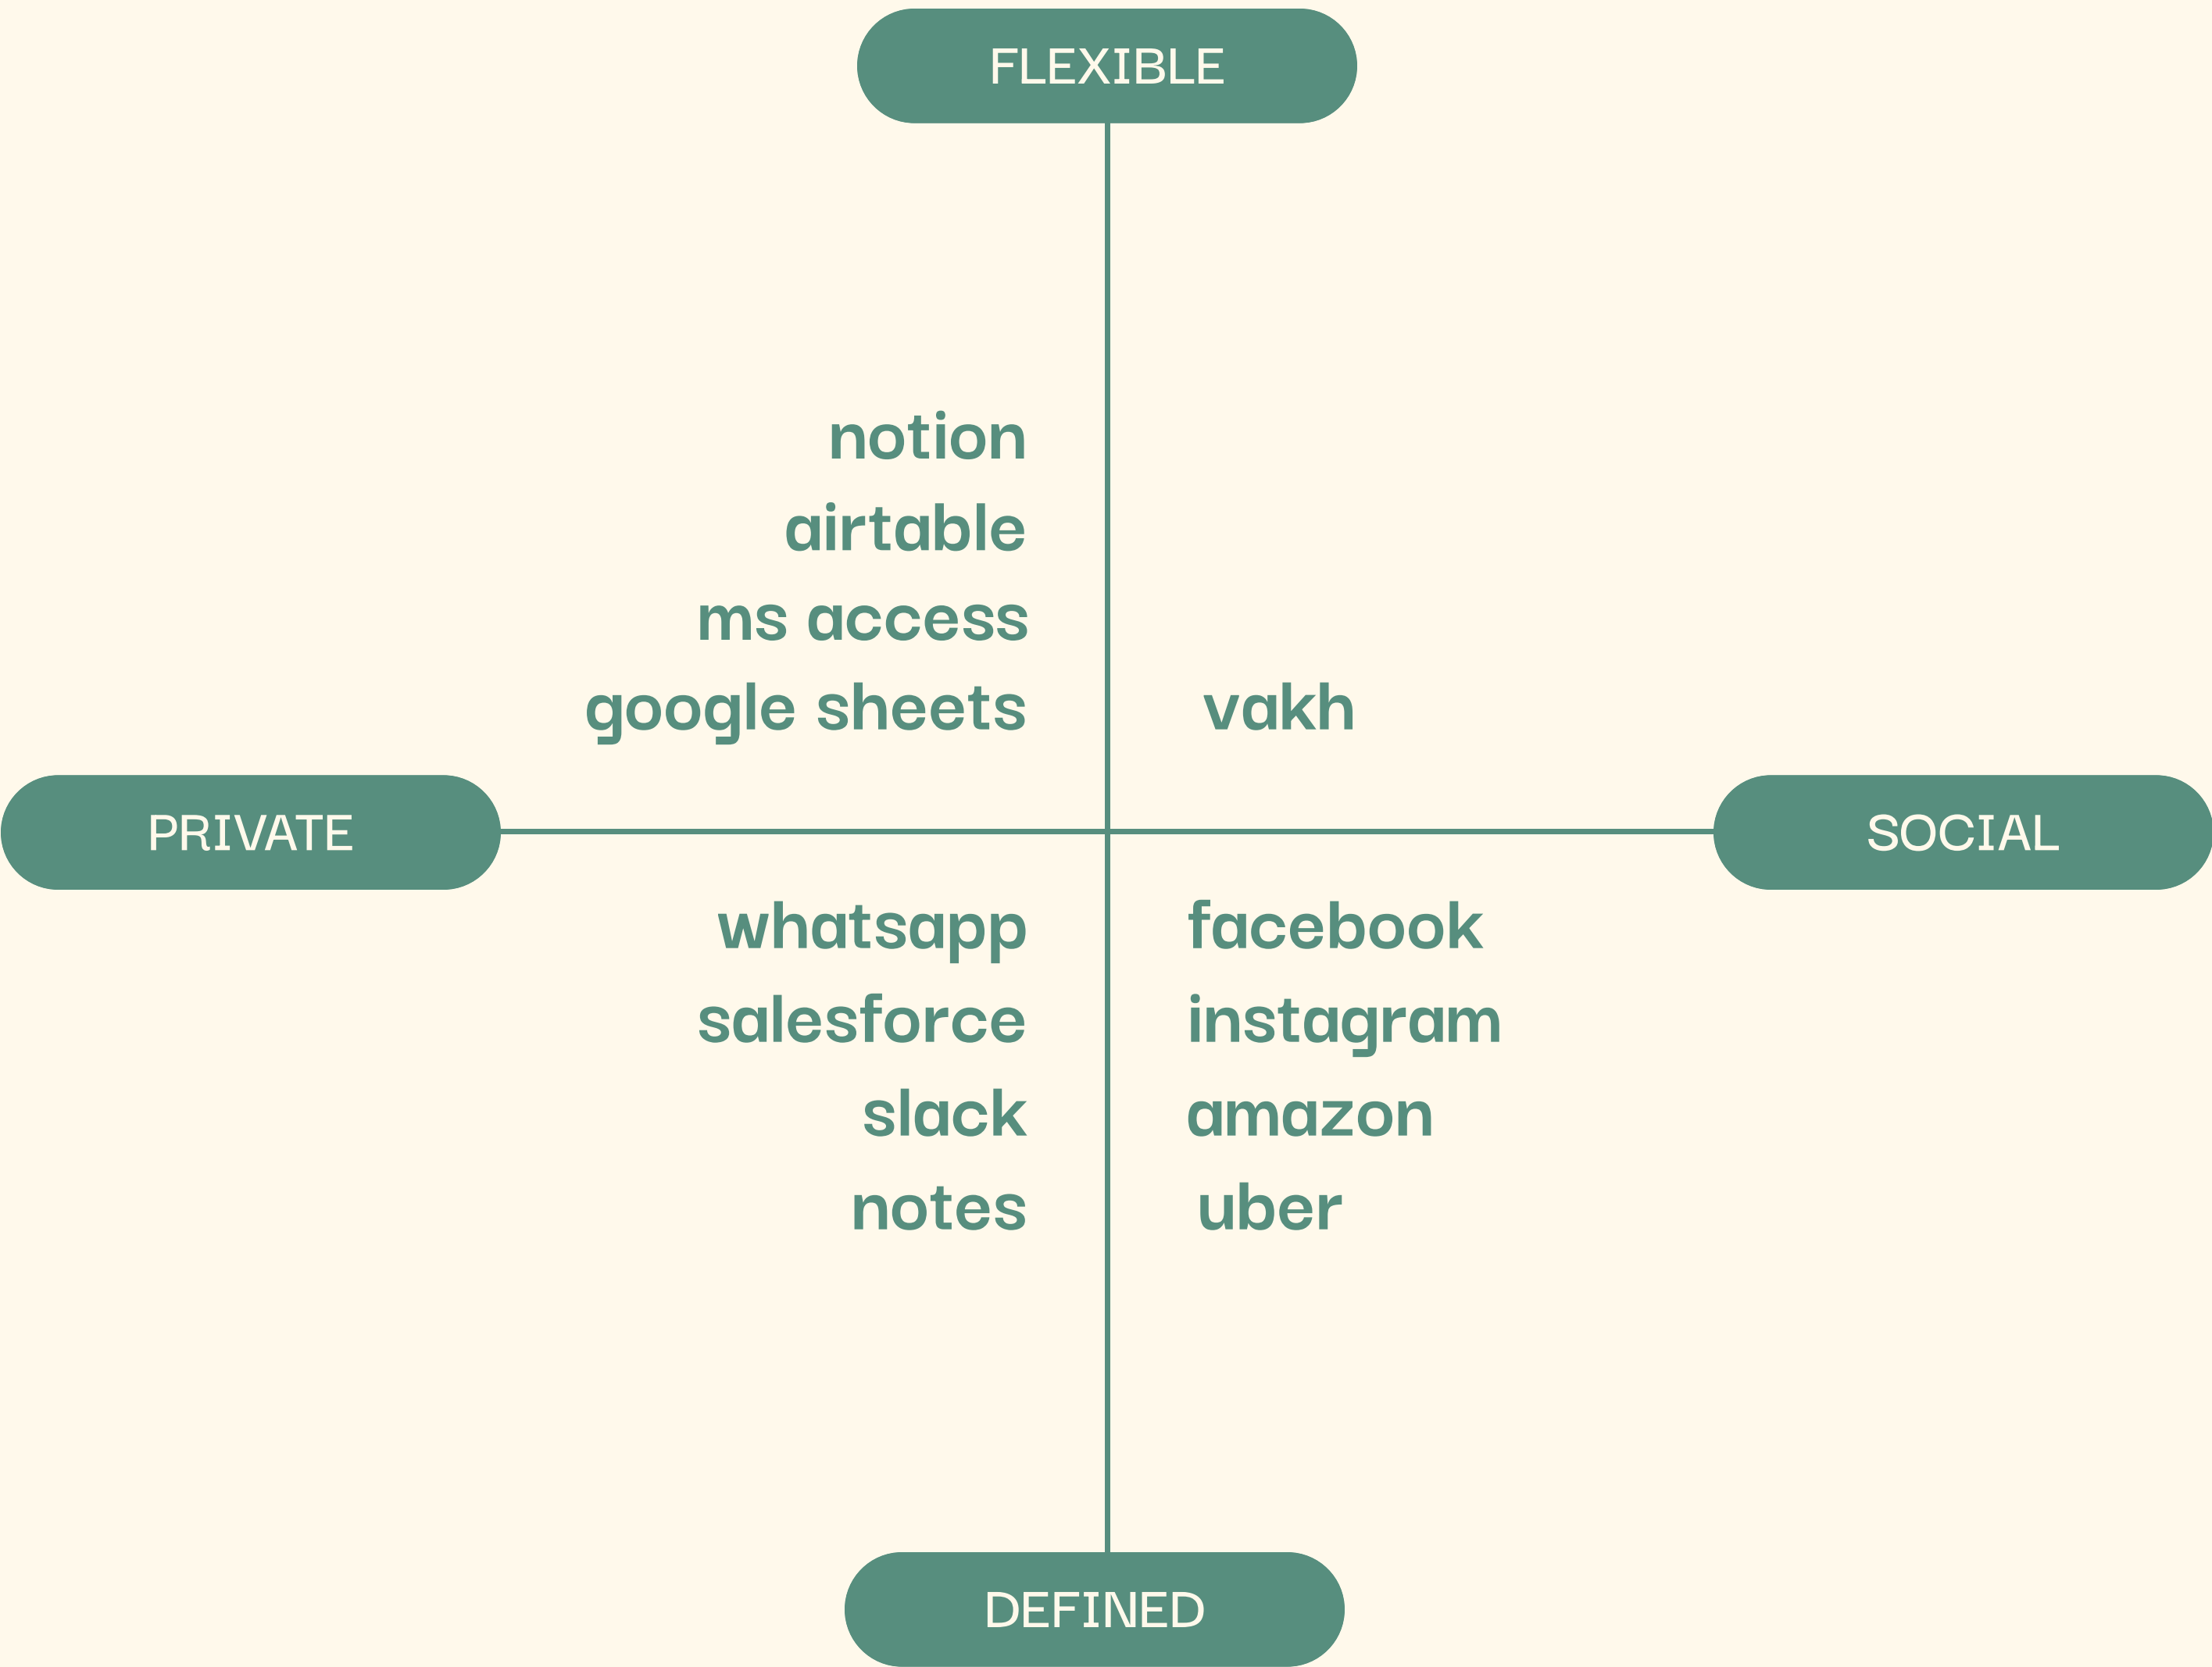

MARKET OVERVIEW

High Collaboration, Low Customisation:

Platforms like Facebook, Instagram, Amazon, and Uber offer extensive collaboration but limit users to predefined data structures and interactions.

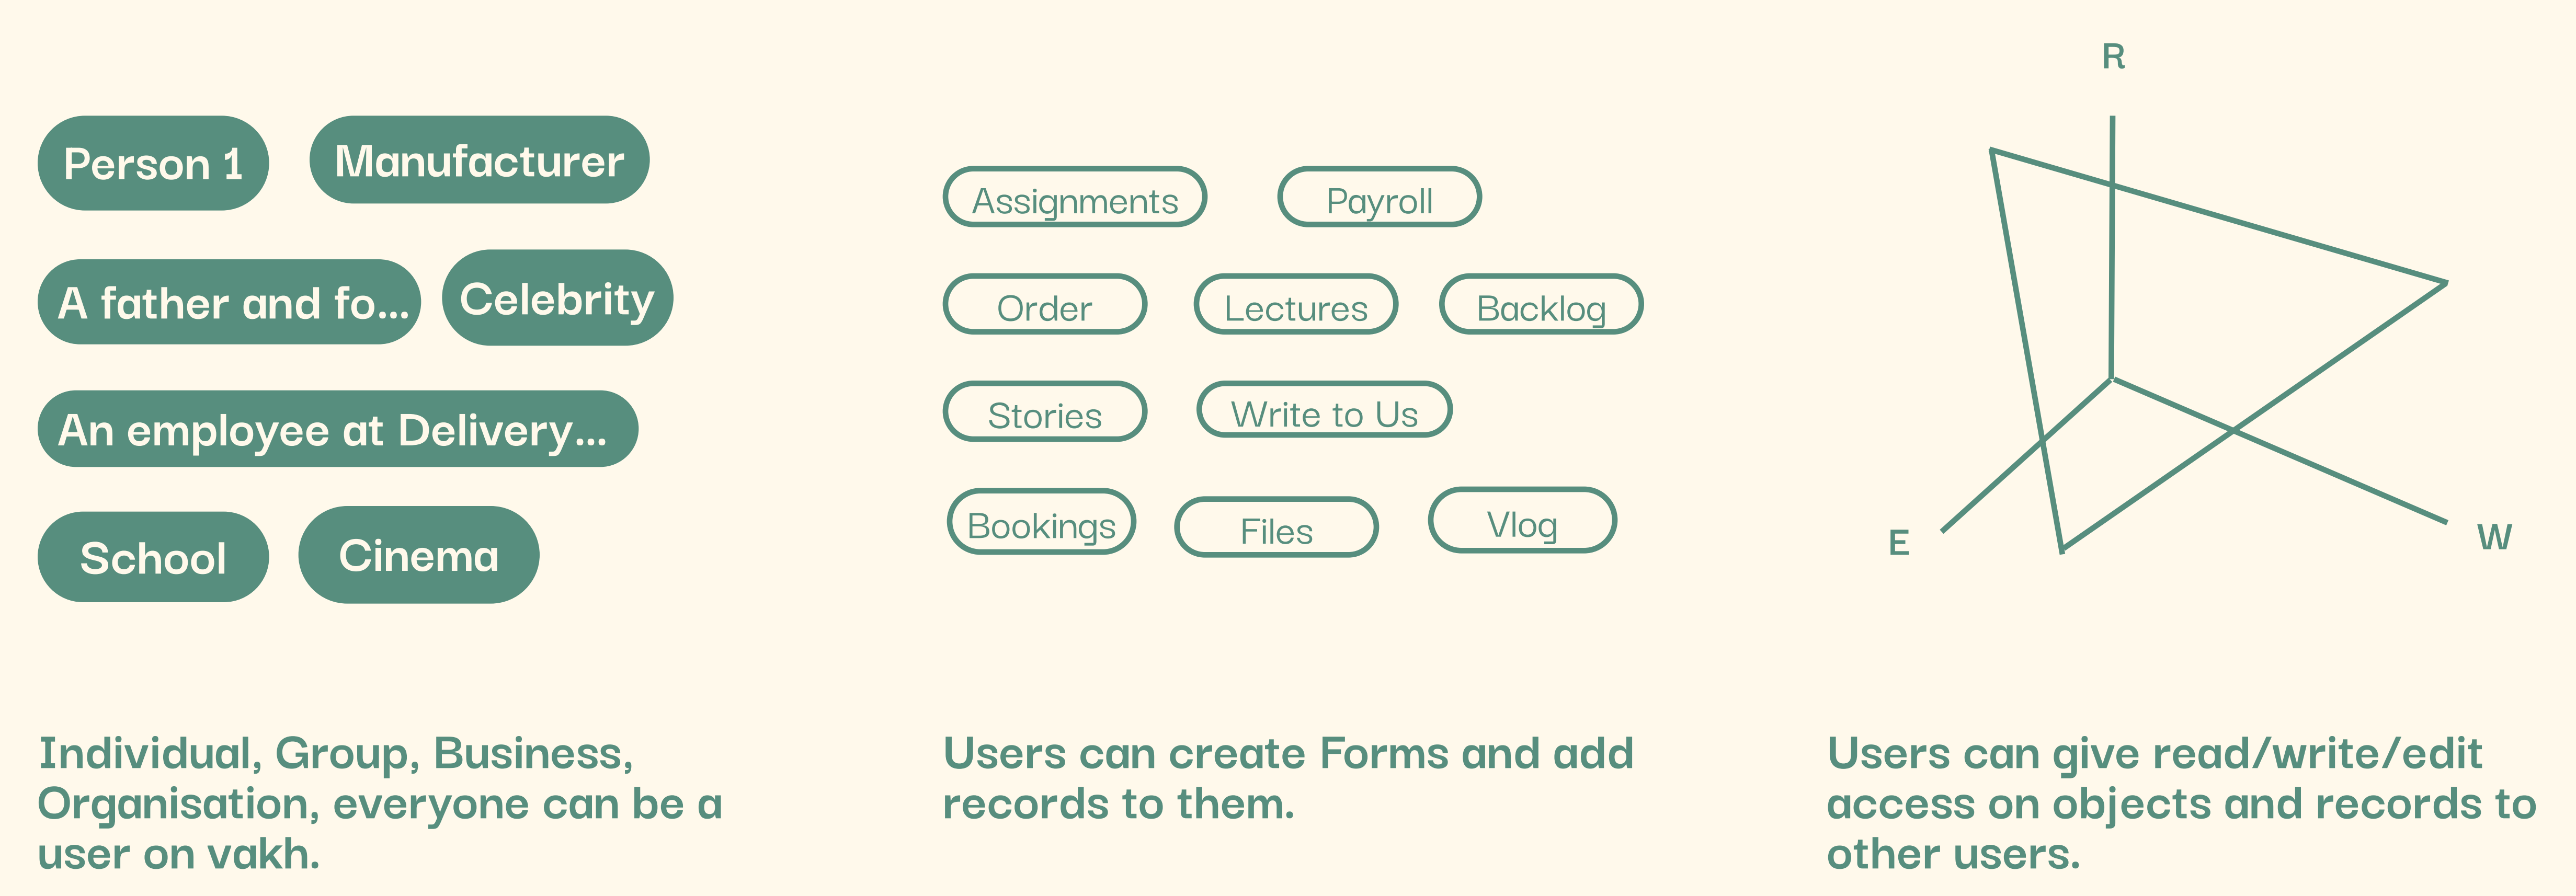

High Customisation, Low Collaboration:

Tools like Salesforce, Airtable, Google Sheets, or custom-built apps offer flexibility in data structuring but lack seamless, wide-ranging collaboration capabilities.

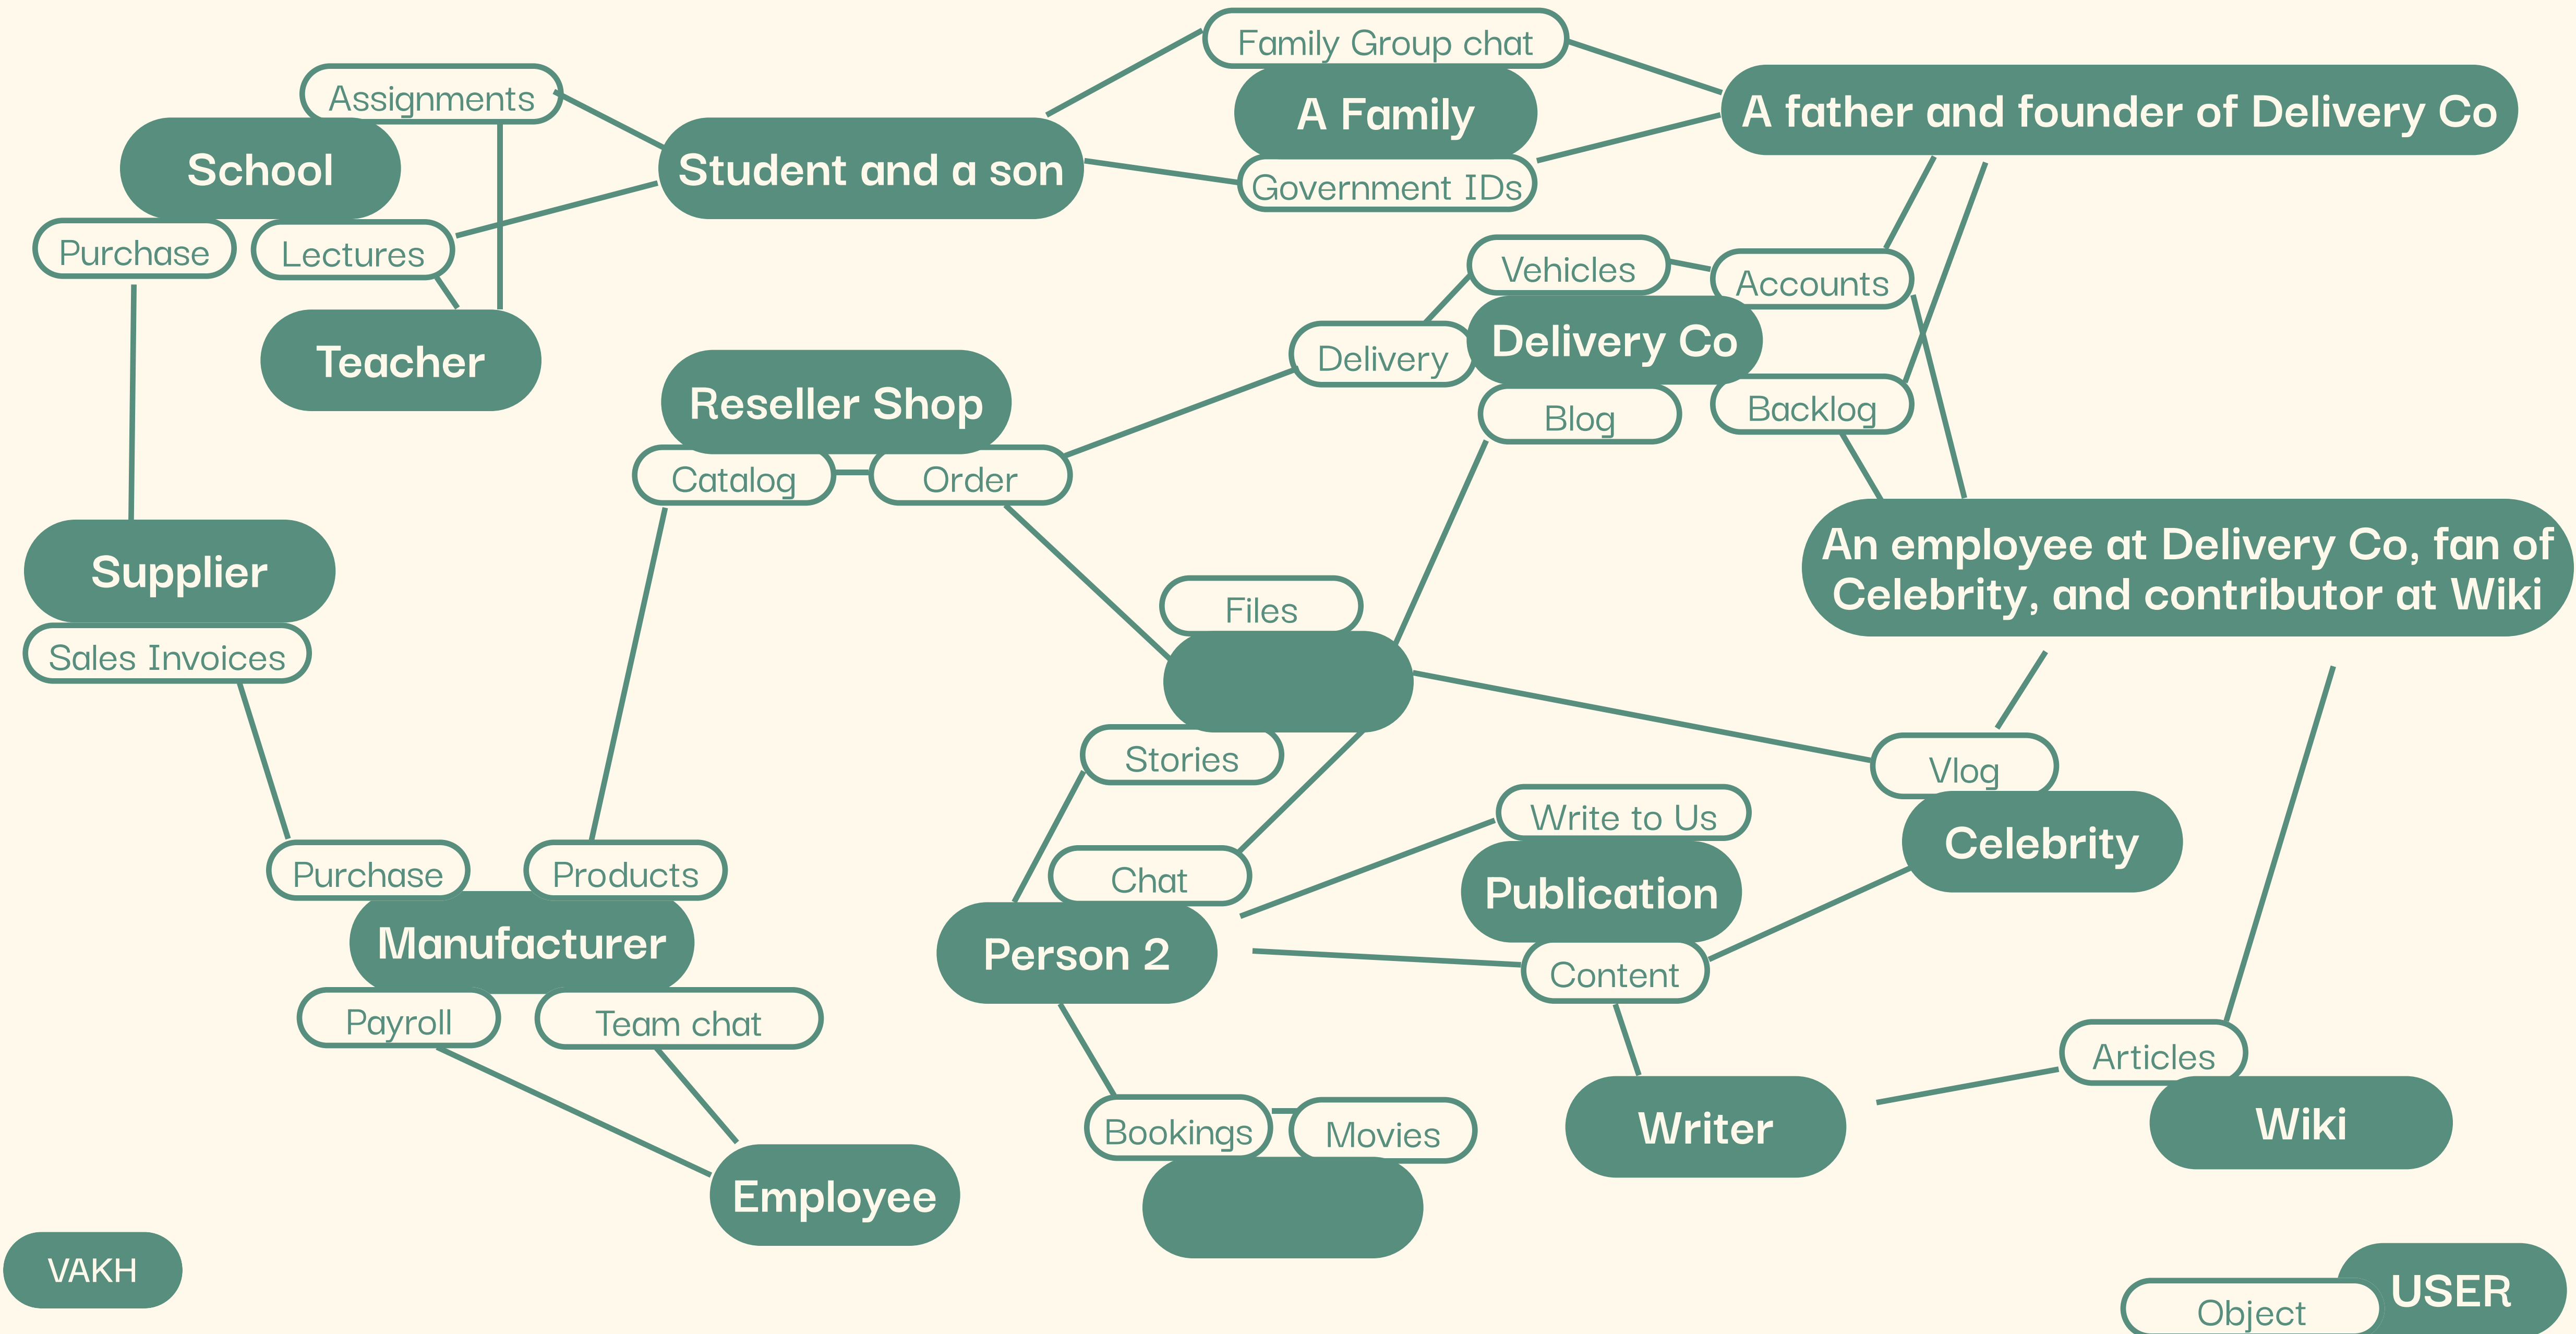

we're vakh
and we want to
platform all and
every.

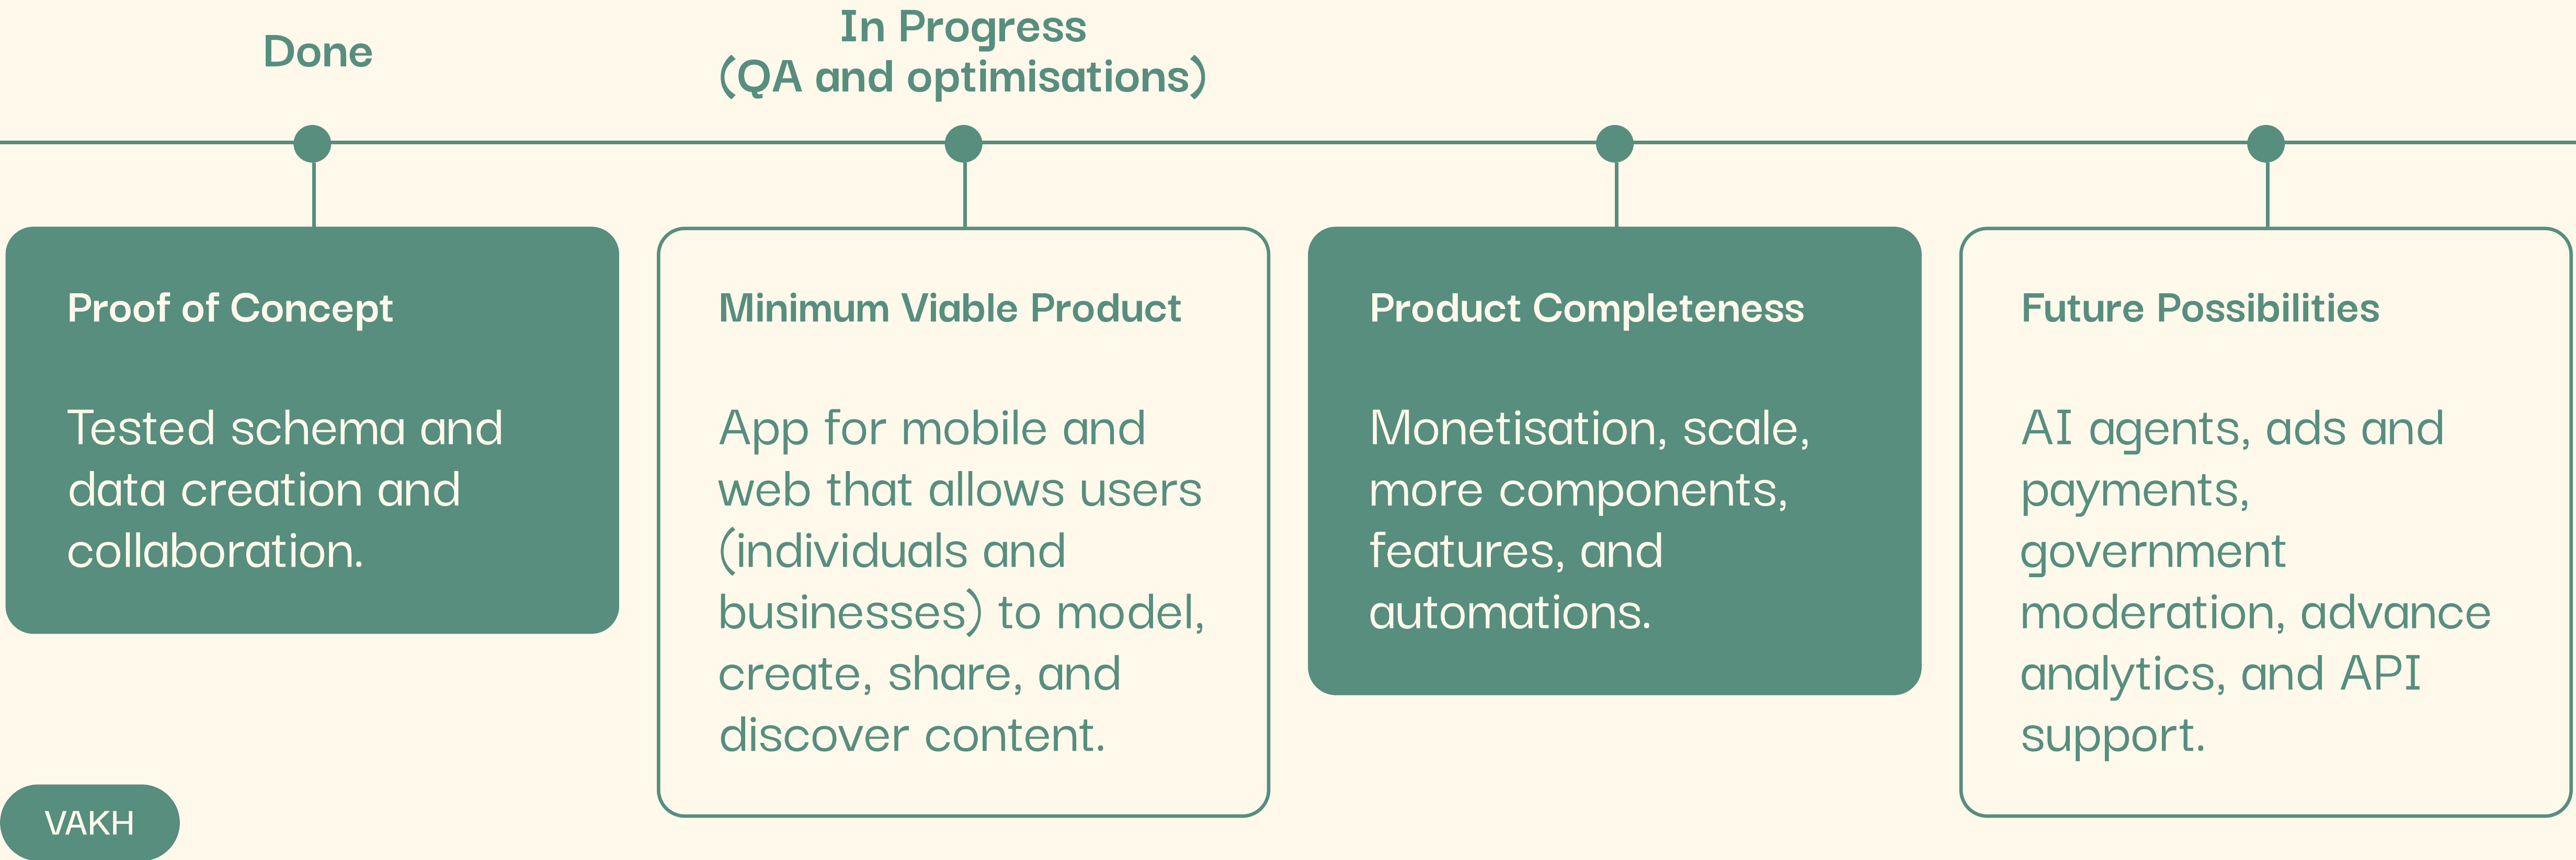

Users, Forms, Sharing

INFINITE POSSIBILITIES

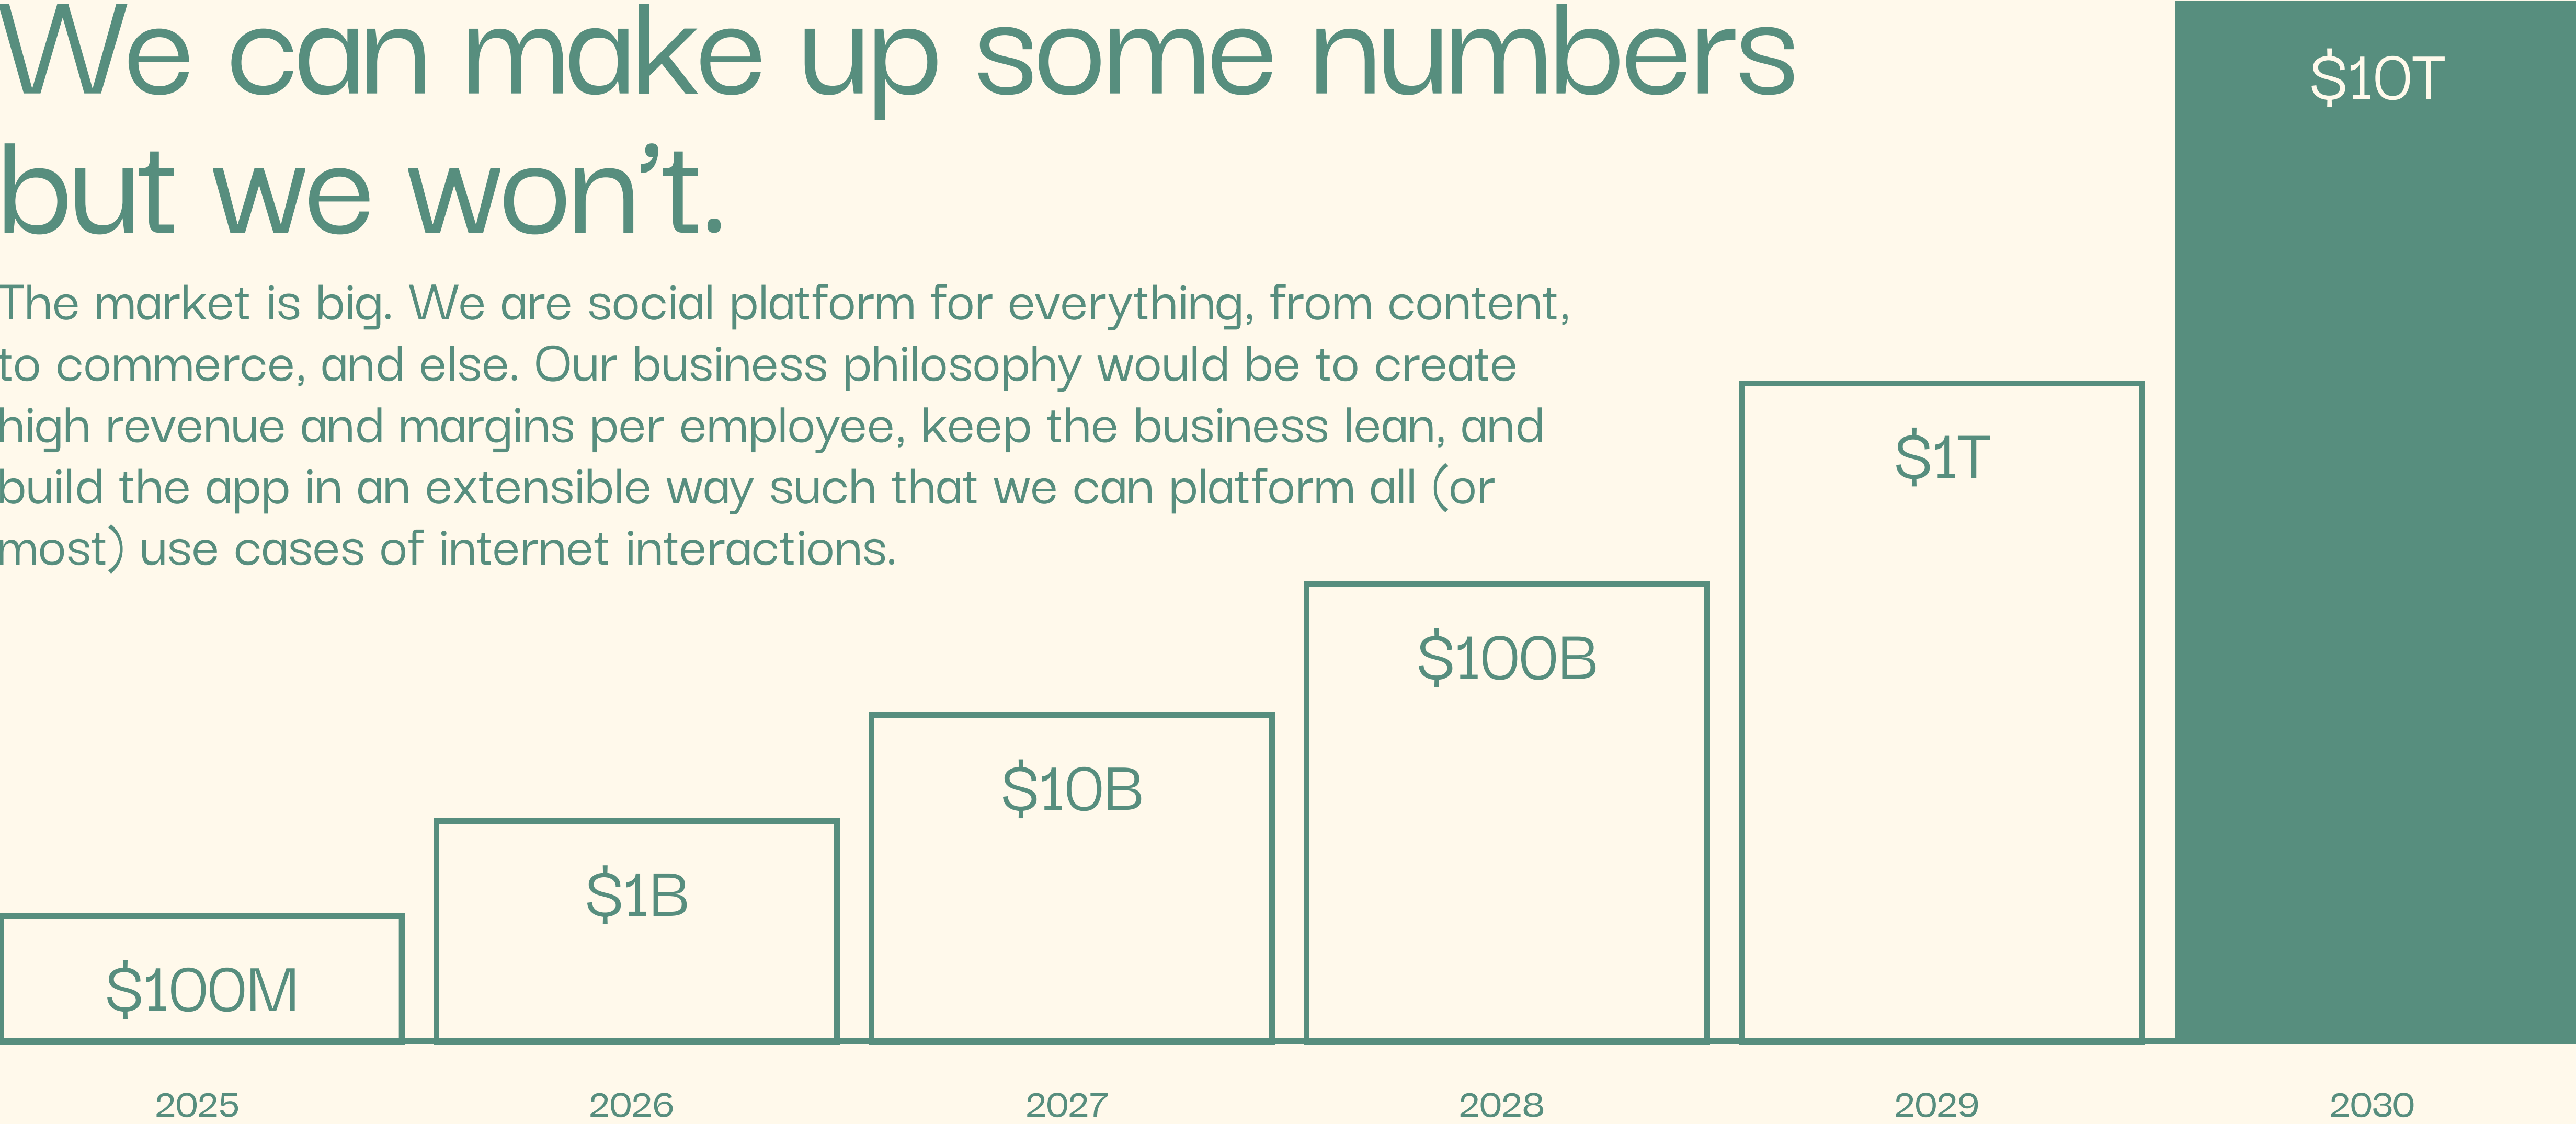

Where we are today and here's how we pace ahead.

We can make up some numbers but we won't.

The market is big. We are social platform for everything, from content, to commerce, and else. Our business philosophy would be to create high revenue and margins per employee, keep the business lean, and build the app in an extensible way such that we can platform all (or most) use cases of internet interactions.
